

Dear Escape The Room team,

I've spent the last two years running tabletop campaigns for friends, which is essentially cluemastering with extra dice. Watching a table get stuck, reading whether they want a nudge or want to keep struggling, and dropping the right detail at the right moment is the part of game running I love most. A cluemaster role at Escape The Room would let me do that work in a space built for it.

Three things I'd bring to the booth:

Pacing and player reading. From GMing, I can tell the difference between a group that's productively stuck and one that's getting frustrated. I know how to give a hint that points without pointing, and when to just let people figure it out themselves.

Patience with mixed groups. I volunteer at a youth center, which has taught me to keep energy up for a room with very different attention spans, confidence levels, and personalities. Escape room groups are similar: a birthday crowd, a corporate team, and a first date all need different versions of the same hour.

Puzzle design sense. I'm building a puzzle roguelike in Godot 4, so I think a lot about how puzzles communicate intent, where players get stuck on mechanics versus content, and what makes a solution feel earned. That helps when troubleshooting why a specific group is hung up on a specific beat.

I'm available evenings and weekends and can start May 18. Thanks for considering my application.

Best,

Bjorn Orstad
